- Start-up and commissioning

Maysville, Georgia

Younglove constructed a new annex silo and warehouse addition in anticipation of increased feed production requirements.

The silo project is a 70-foot-diameter by 140-foot-tall, 425,000-bushel unit. This includes a 40,000-bushel-per-hour belt conveyor to fill, a 5,000-bushel-per-hour drag conveyor and leg reclaim, and a bin sweep for periodic cleaning.

The warehouse is a 65-foot by 51-foot concrete panel structure with a concrete roof to match the existing structure. This structure will store bagged micro ingredients and tote sacks.
