Star of the West Milling
Company

Size/Capacity

330,000 bushel

Completion Time

4 months

Younglove's Services

- General construction
- Construction management
- Slipform concrete construction
- Equipment installation

Quincy, Michigan

A four-pack with one interstice bin was constructed for additional wheat storage. The four silos were 30 feet in diameter by 139 feet tall. Distribution was accomplished by tying in to the existing receiving system and transferring across a bridge with a 10,000-bushel-per-hour conveyor. The silos have side bin discharges to the reclaim conveyor, which runs down the center and ties in to the adjacent reclaim equipment. Aeration and heat detection systems were also provided.
